

MARITIME PROTECTION

ThirdEye Systems

making systems smarter

Ports are the main economy artery of a country's and the main gate to and from it, such as, security the complex environment of land and sea is a difficult task, which neglecting it effects directly on the country revenue and credibility. Due to complex environment high level security is a hard mission to accomplish due to the mixed terrains of sea and land, easy access from the sea and more

ThirdEye System's will protect your maritime sovereignty, ports and facilities with our autonomous analytics AI-based systems, while autonomously scanning large scale area with different backgrounds and terrains, detect, track and alert independently while all of the system analytics processed on board remotely.

SYSTEM ADVANTAGES:

- Cost effective and easy to maintain
- No man in the loop
- Can be integrated on existing systems
- Fully autonomous mission plan
- fusion mode
- Can be calibrated by the organization needs and limitations
- Fully automated based on user designated parameters
- Effective in various landscapes such as sea, land and urban
